

A Reliable Fax Solution

The Fax Pro module is a reliable, robust inbound/outbound faxing server. You simply enable faxing for any user on the system; then you point a phone number to specific fax user and let us answer the fax call.

Fax Pro adds functionality to the standard fax capabilities.

Users can send outbound faxes via a web interface by simply entering a phone number and uploading a PDF or TIFF file.

You can optionally set the outgoing fax to use a locally stored fax cover sheet and enter a personal message on the cover sheet.

What do I get as part of the Fax Pro package?

- ▶ Individual inbound fax to e-mail accounts for unlimited users
- ▶ Outbound faxing capability
- ▶ A simple web interface to manage inbound and outbound faxes
- ▶ Ability to store inbound and outbound faxes on the server for easy viewing and archiving
- ▶ A company-wide cover sheet that allows easy customization for each user
- ▶ Ability to configure and manage Asterisk T38 gateway options on each extension and outbound route to take advantage of this feature in Asterisk 10 and newer
